

High Quality 4D Development

David Adams

Introduction	1
Chapter 1 - About This Training	3
What To Expect	3
Course Organization	3
Course Contents	3
About The Materials	5
Conventions Used in This Manual	7
Phones & Pagers	7
Getting In Touch	7
Writing Bug Free Code	9
Chapter 2 - Writing Code with Fewer Bugs	11
Overview	11
Ask the Method Editor to Check Your Code	11
Use the Debugger Defensively	11
Scan for Errors With SanityCheck	12
Compile With "All variables are typed."	12
Pay attention to Case Structures	13
Print Routines	15
Have Someone Else Read Your Code	15
Notice and Correct Habitual Mistakes	16
Defensive Code	16
Test Pointers	18
One Routine: One Task	18
Focus on Processes, Not Personalities	18
Learn About and Adopt Techniques That Work	19
Chapter 3 - Handling Errors	21
Overview	21
Range Checking	21
LOG EVENT	22
Error Handling with ON ERR CALL	22
Writing Reusable Code	25
Chapter 4 - Managing Complexity	27
Introduction	27
People and Computers Are Different	27
Factors that Increase Complexity	28

Chapter 5 - Modularity and Information Hiding	31
Introduction	31
Definitions	31
Modularity	32
Information Hiding	34
Modularity and Data Hiding in 4D Today	40
Chapter 6 - Choosing a Level of Directness	43
Introduction	43
Examples of Levels of Directness	43
Rules of Thumb	47
Chapter 7 - Writing Generic Code	49
Introduction	49
Pointers	49
Abstract Data	51
Network Oriented Computing	55
Chapter 8 - Network Oriented Computing	57
Introduction	57
Network Oriented Computing	57
Chapter 9 - Triggers	59
Introduction	59
About Triggers	59
Trigger Cascades	62
How to Write Triggers	65
Error Handling	67
Trigger Optimization	69
Triggers and Transactions	69
Record Management Under 4D Server	71
Returning Extra Information From the Trigger	73
Restrictions on Your Code In Triggers	75
Trigger Development Worksheet	77
Chapter 10 - Server Programming	79
Introduction	79
How to Do Server Development	79
Process and the 4D Environment	80
Database Methods	81
Variables and 4D Server	86
Server-Optimized Commands	88
Server Programming Gotchas	90

Chapter 11 - Stored Procedures	93
Introduction	93
Uses For Stored Procedures	93
Stored Procedure Basics	95
Stored Procedure Performance Tuning	98
Stored Procedure Styles	101
Shutting Down	102
Stored Procedure Reminders	105
Chapter 12 - Distributed Processing	107
Stop Wasting Time	107
Uses for Distributed Processing	107
Where Do You Do the Processing?	109
General and Client-Specific Jobs	111
Programming Processes To Return Results	112
Chapter 13 - Execute On Client	117
Overview	117
Example Scenario	117
Sequence of Events and Summary of Commands	118
Automatic Client Registration	119
The REGISTER CLIENT Command	120
Sending a Request	123
The GET REGISTERED CLIENTS Command	125
The Message Queue	125
Alternative Strategies	126
Optimization That Works	127
Chapter 14 - Optimization Overview	129
Quick Look	129
When to Optimize Code	129
Listen to Users	129
Go For Maximum Visual Impact	129
90% of Processing Time Is Spent in 10% of Code	129
The Time-Space Trade-off	130
Rethink the Problem	130
Work With the Product	131
Leave Incremental Optimizations For Last	131
Test, Test, Test	131
Optimize Yourself	131
Multiple Choice	132
Optimization Calculator	132

Chapter 15 - Optimizing Queries	133
Quick Look	133
Queries and Indexes	133
Query Control Commands	134
Set Query Limit	134
Set Query Destination	135
Example Structure	136
Sets	136
Named Selections	137
Variables	138
Queries in 4D 6.5	140
Chapter 16 - Summary Data	141
Quick Look	141
Compound Fields	141
Summary Fields	143
Summary Tables	145
Chapter 17 - Saved Sets	151
Quick Look	151
Saving Sets	151
Set Accuracy	152
Appropriate Uses of Saved Sets	152
Maintaining Saved Sets	153
Real World Choices	155
Chapter 18 - Caching	157
Quick Look	157
About Caches	157
Kinds of 4D Caches	158
Local Caches	159
Local Cache Examples	160
Example #1: States and Abbreviations	161
Example #2: Product Codes	163
Example #3: ZIP Codes	165
Fixed Length Documents	166
Server Side Caches	168
Centralized Initialization	169
Saved Sets	169
Live Reports	169

Creating Successful User Interfaces	171
Chapter 19 - Creating Successful User Interfaces	173
Introduction	173
Solving Interface Problems	173
Good Minds Create, Great Minds Steal	174
Design Sense	174
Chapter 20 - Interface Charters	177
Introduction	177
User Interface Guidelines	177
Object Appearance	179
Fonts	180
Graphics	184
Object Behavior	185
Modality	185
Windows And Navigation	187
Related Data	188
Accepting and Cancelling Changes	190
Buttons	190
Menus	191
Create A Living Charter	194
Chapter 21 - Visual Design Principles	197
Overview	197
Alignment	197
Symmetry	197
Consistency	199
White Space	199
Grid Based Design	200
Chapter 22 - Interface Control Commands	205
Overview	205
Interface Control Commands	205
Object Names Versus Variable Names	206
Custom Style Sheets	211
Chapter 23 - Tab Controls	215
Introduction	215
About Tab Controls	215
Tab Presentation	217
Tab Usability	220
Creating Tabs	222
Summary	228

Chapter 24 - Hierarchal Lists	229
Overview	229
Tab? List Box? Tree?	229
Behavior	231
Creating Lists	231
List References	232
Clearing Lists	233
Properties	234
Working With List Properties	237
Working With List Item Properties	240
Building Lists From Record	243
Records To Lists: Shortcut	245
Converted Linked Lists	246
List Gotchas	249
Chapter 25 - Drag and Drop	251
Introduction	251
Drag and Drop Usability	251
Drag and Drop Interfaces In 4D	252
Programming Drag and Drop in 4D	255
Drag and Drop Properties	256
Drag and Drop Interface Suggestions	256
Guerilla Design Techniques	259
Chapter 26 - Design Is Good	261
Design	261
Software Engineering	262
Design Methodologies	263
The Development Lifecycle	264
Catch Defects Early	265
Ongoing Testing And Refinement	266
Chapter 27 - Guerilla Design	267
Optimize Yourself	267
Techniques	267
Benefits	268
Are These Techniques For You?	268
Creative Thinking	269

Chapter 28 - Sketching A System	273
What Comes First?	273
An Example	273
Improving The Design Process	276
.....	277
Working With Users	278
Integrating User Changes	278
Videotaping	279
Level Of Design	279
System Shape	279
Hierarchy Is Natural	281
Benefits Summary	282
Chapter 29 - Designing Screens On Paper	283
Rapid Application Development	283
Rapid Application Development Is Too Slow	283
Designing Screens On Paper	283
Tools Of The Trade	284
Example	285
Which Design Is Best?	288
Benefits Of Paper Designs	289
Chapter 30 - Prototyping and User Testing	291
Introduction	291
Breadth and Depth	291
Building Paper Prototypes	292
Testing Paper Prototypes	293
Functional Prototypes	295
Chapter 31 - User Interface Reviews	297
Overview	297
User Interface Reviews	297
User Interface Principles	299
